

# Actra-Close Drawer Slides

## A5245-Series

The A5245-Series combines Actron's popular A5200-Series with the all new Actra-Close mechanism. All interfaces are exactly the same, and the installation of the damper beneath the slide ensures full drawer extension and load capacity matching the original A5200-Series.

## A5285-Series

For customers concerned with weight savings, our A5285-Series provides the same soft closing ability as the A5245, and is on average 18% lighter. The lightweight design ensures that your application is maximized for fuel savings and/or increased payload options.

## Retrofit Kits

The A53105-Series provides customers with the ability to retrofit drawer assemblies already in the field. Simply mount the Actra-Close mechanism to the cabinet and the supplied actuating link to the drawer, and any 3/8" thick slide becomes a fully functioning, soft close assembly. Models are available with various closing forces ensuring the correct force is specified for your exact needs.
